

PixelChat

LOUNGE

PixelChat's ground-breaking technology offers real-time, accurate, translated communication in over 100 different languages, presenting exciting opportunities for teams and for individuals, in business or personal communications. PixelChat Lounge opens the door to new levels of cooperation, development and understanding and makes webinars, conferences, online education, research and development and breakthrough collaborations more and more accessible. The potentials that lie ahead are limitless.

PixelChat Lounge allows users to communicate using text, voice activated text and synthesised voice. All this happens in real time and in over 100 languages.

From social media to formal business meetings, PixelChat Lounge presents a new way to communicate via speech, text or podcasting to friends, associates or business colleagues around the globe using pc and mobile phone technology. But now everyone can do this in their own mother tongue, and you don't need to know the language(s) which others are using. Your language becomes the common language: one world, one voice.

one world...one voice

PixselChat

How does PixselChat Lounge work?

On Mac or PC, for example, you set up a virtual meeting in PixselChat Lounge the same way that you would with other video conferencing platforms. You select the language that you want to use from the menu and the other people in the meeting do the same. You communicate in the language that you select (English, for example) and you receive communication in your selected language (English) from the others in the meeting. If you want to have a discussion with a colleague or customer who doesn't know English, then your English communication gets translated automatically into the language which they are using on PixselChat Lounge.

On iPads, tablets and mobile devices, you can also now enjoy the advantages of zero language barriers on all your social media communications!

PixselChat LOUNGE

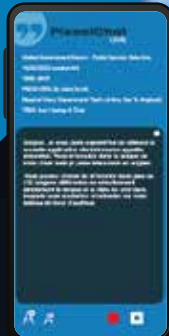

Just another translation app?

Most definitely not. PixselChat Lounge is a fully fledged communication platform with automatic, AI driven, real time translation built into it. It's fundamentally different to translation apps because you can have a conversation with others without needing to know their language.

CONFERENCES EXHIBITIONS LAUNCHES

Bring your events to a wider, global audience and deliver your message with confidence to all who attend, in situ or remotely.

PixelChat Live brings the power of PixelChat's translation capabilities to the world of conference, webinar, seminar, lecture and presentation. In fact, any event where there is a need for attendees to receive part or all of the information being presented, in a different language to their own.

The opportunities for increased attendance when an event uses PixelChat are exceptional, with an instant appeal and accessibility for a far wider, global audience.

PixelChat LIVE

A world where everyone speaks the same language has long been the goal of mankind, where human knowledge, culture and ambition can be shared. Where projects can benefit from truly international research and developmental resources.

Now, with PixelChat Live, greater understanding, better collaborations, with sharing and building of concepts and ideas, is truly within your grasp.

Bringing organisers and attendees together with a common, shared language facility, will create an exciting world of opportunity for the future.

Pixelchat LEARN

SEMINARS
WEBINARS
LECTURES
PRESENTATIONS

better understanding leads to greater knowledge

Developed from the original PixelChat Live, PixelChat Learn has a specially developed user interface and dashboard that allows webinars, seminars and in particular, lectures to be delivered anywhere in the world with an Internet service.

With presenter, moderator and end-user screens, the app offers a unique opportunity for students to attend in situ or remotely and to receive the broadcast in their own language and in real time.

PixelChat PLUG IN

CRM
CHATBOTS
SALES TEAMS
GLOBAL CUSTOMER SUPPORT

PixelChat can run either on your own servers or on ours. If PixelChat runs on our servers, we do not record, store or have access to any of the interaction or communication which you have with your customers.

Using PixelChat Plugin is simple. A customer visiting your website and wanting to connect with you will be able to choose a language. This will be their communication language. The customer uses this language to both communicate with, and receive communications from, your team.

For example, let's assume that your team members can only speak English and you have a customer in Germany who doesn't speak English. Your German customer will select German as their communication language and this will be translated in real time and received by your team members in English. Thereafter, your team members will communicate in English and this will be translated in real time and received by your German customer in German.

PixelChat Plugin allows you to have a team with multi lingual capability and works with Chatbots as well as human team members. You can, therefore, provide customer support and other services to your customers on a world-wide basis, regardless of their spoken language.

There are many platforms offering translation services but we are not aware of any that provide instant translation in 100 dialects or languages. PixelChat plugin provides a simple software interface to allow any platform to incorporate real-time translation and real time multi lingual interaction.

To build similar functionality into your own platform would require significant development. We integrate into PixelChat Plugin many translation services based on their accuracy and performance for each language, as well as using our own. These can change as services evolve so we constantly monitor the services available and ensure that PixelChat uses the best services available.

PixelChat Plug In gives you real time translation and communication in over 100 different languages and dialects! Now you can interact with customers worldwide in their language!

PLUG IN

one world...one voice

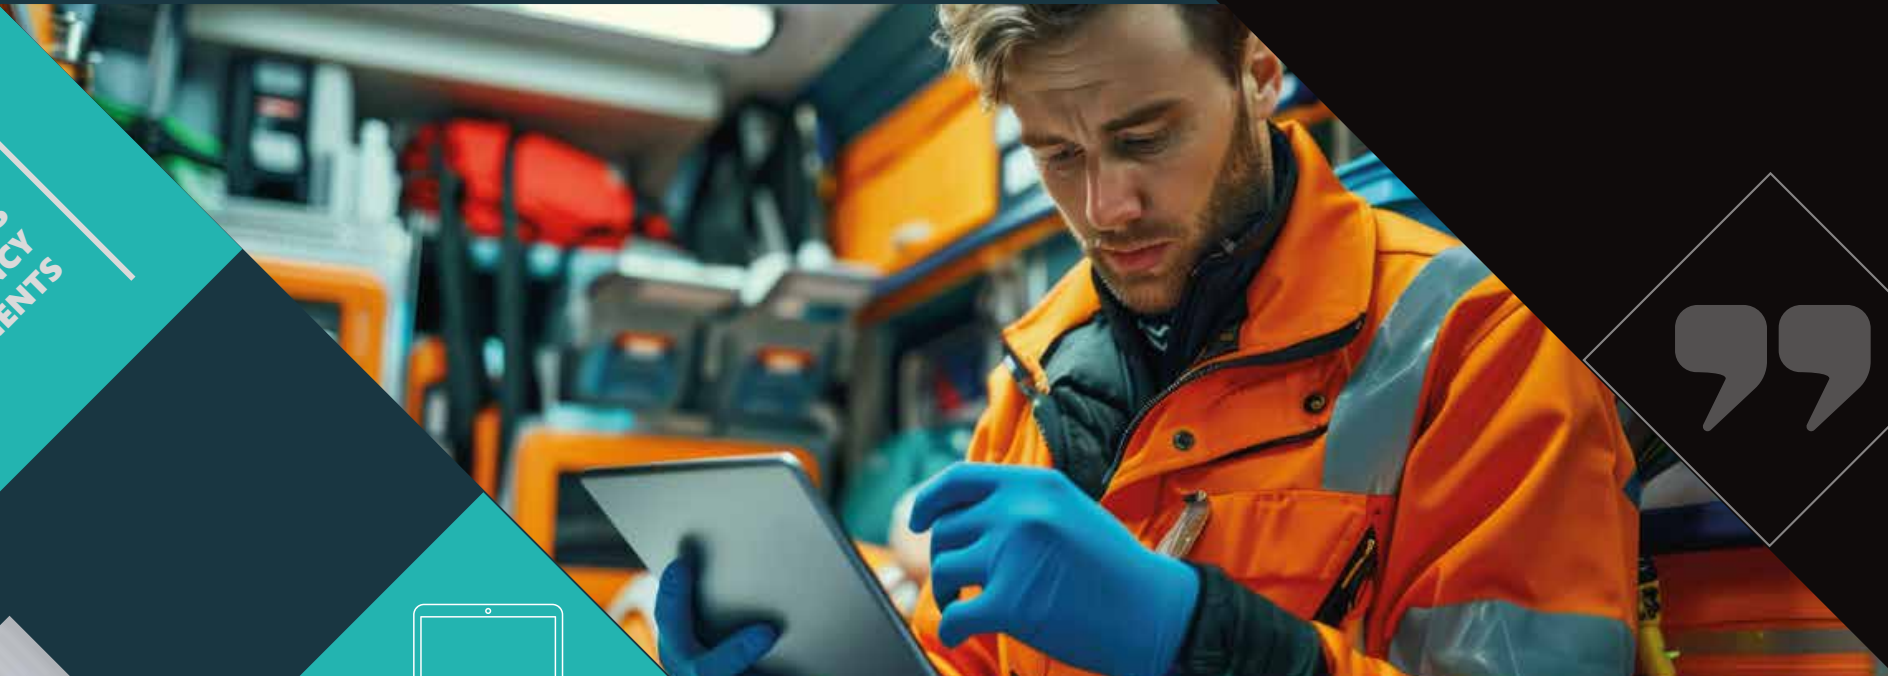

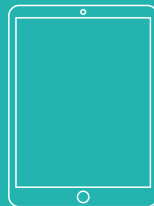

Installing PixelChat Plug In

PixelChat Plug In has been designed to integrate/plug in as easily and as seamlessly as possible into your platform. A couple of lines of code will connect to PixelChat and allow you to run this powerful app on your platform. There's no need to worry about compatibility issues as we review your existing platform architecture to work out the most effective way of installing PixelChat Plugin.

We've also designed PixelChat Plug In to be expandable. It's built on a platform with elastic resource management which increases resources at peak demand and provides resilience to outages. As part of the set-up process we will provide training and a PDF Guide together with an online video guide.

PixelChat MEDIC

PARAMEDICS
HOSPITALS
ACCIDENT & EMERGENCY
DISASTER & CRISIS ENVIRONMENTS

PixChat Medic is our full translation dialogue app specially developed for use within the medical profession. It is particularly designed for paramedics who need to converse with speakers of other languages in emergency situations as well as for use in hospital and crisis environments.

The tablet or iPad-based app not only allows for easy communication between medic and patient, but also features facilities for accessing patient records, where available, and linking with remote consultants when specialist advice is required.

With voice to text, text to text and audio playback features together with auto language detection, PixelChat Medic offers not only crucial time saving, but life saving possibilities too.
